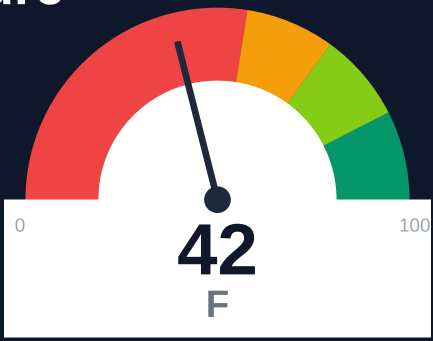
Dynamic

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-06-25 14:19 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY



Risk: Critical

Key Metrics

Pages scanned: 2286

Report type: Premium Executive Audit

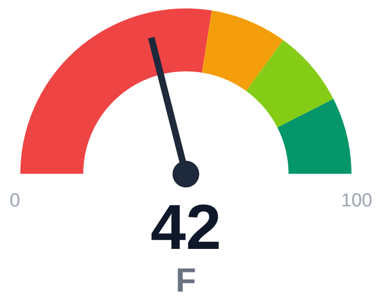
Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 61
- Link verification inconclusive for 21 URLs (auth/rate-limit/server block); these are exclu
- SEO/GEO issue rate is high: 20.13%
- API usage-doc coverage is low: 66.67% (1534 API pages detected)

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary



Dynamic.xyz documentation spans 2,286 crawled pages with 100% crawl coverage. Critical issues include 61 confirmed broken internal links across user-facing docs, 20.13% SEO/GEO issue rate, and only 3.37% of pages displaying last-updated metadata. API reference coverage is 66.67% across 1,534 detected API pages. Example reliability detection returned 0%, indicating a likely JS-rendering detection gap rather than true absence of code examples. Retrieval readiness scores 73.86 (moderate band), with 68.64% stale-risk flagged pages and only 11.71% of 333 key claims backed by evidence.

External posture: SEO/GEO issue rate **20.1%**, public API coverage **66.7%**, broken links **61**.

42 Audit Score	**F** Grade	**Critical** Risk Band
2286 Pages Scanned	**61** Broken Links	**20.1%** SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://dynamic.xyz/docs	2286	61	66.7	0.0	20.1

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	**92+**	**-50**
Industry average (developer docs)	**85**	**-43**
Minimum acceptable	**70**	**-28**
Your score	**42**	**-**

Gap to industry average: **43 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Board-Level Metrics

API Coverage (Public)

66.7%

SEO/GEO Issue Rate (lower is better)

20.1%

Example Reliability (estimate)

0.0%

Freshness Visibility (last-updated metadata)

3.4%

Internal Metrics (from scorecard)

API Coverage (Internal)

66.7%

Example Reliability (Internal)

0.0%

Docs-Contract Drift

88.3%

Pipeline Opportunity Fit (Deterministic)

This section maps cold-audit signals to problem classes that the pipeline can remediate directly. No LLM inference is used in this mapping.

LLM Retrieval Readiness (deterministic proxy)

73.9%

Audit Confidence (crawl scope + verification quality)

90.0%

Readiness band: **Moderate**. Confidence: **High**. Open remediation opportunities: **5**.

SEO/GEO Quality Signal (inverse issue rate)

19.5%

Example Reliability Signal

0.0%

Freshness Visibility Signal

3.4%

API Coverage Signal

66.7%

LLM retrieval readiness breakdown (deterministic)

Chunkability

75.2%

Answerability

98.6%

Citationability

99.9%

Stale Risk (inverse)

31.4%

Evidence coverage: **11.7%** (39/333 key claims backed by deterministic evidence signals).

Highest-value remediation targets

Problem	Severity	Pipeline solution path
Internal documentation link integrity issues	HIGH	Weekly link governance via automated audits and consolidated remediation queue
Search and AI readability quality gaps	HIGH	Deterministic SEO/GEO linting and fix cycles before publish
Code example reliability risk	HIGH	Snippet lint + smoke checks + protocol self-verify coverage
Weak freshness and lifecycle visibility	MEDIUM	Lifecycle management, stale detection, and weekly governance cadence
API reference coverage and drift risk	MEDIUM	API-first contract flow, validators, regression gates, and drift checks

Financial Exposure Model

Low Estimate

$241,985

annual exposure

Remediation: **$1,615**
Monthly loss: **$3,188**
Opportunity: **$16,843**/mo

Base Estimate

$325,973

annual exposure

Remediation: **$4,208**
Monthly loss: **$9,970**
Opportunity: **$16,843**/mo

High Estimate

$466,776

annual exposure

Remediation: **$6,800**
Monthly loss: **$21,488**
Opportunity: **$16,843**/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-API-COVERAGE	Undocumented API operations	HIGH	$2,244	$850
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	HIGH	$1,734	$722
F-FRESHNESS	Documentation freshness debt	HIGH	$867	$425
F-DRIFT	Code/docs contract drift	HIGH	$1,469	$510
F-RETRIEVAL	RAG retrieval quality risk	HIGH	$1,744	$765
F-LAYERS	Missing required doc layers	LOW	$1,377	$638
F-TERMINOLOGY	Terminology inconsistency	LOW	$536	$298

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-API-COVERAGE	Undocumented API operations	HIGH
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	HIGH
F-FRESHNESS	Documentation freshness debt	HIGH
F-DRIFT	Code/docs contract drift	HIGH
F-RETRIEVAL	RAG retrieval quality risk	HIGH

Recommended Actions

1. Fix all 61 confirmed broken internal links in user-facing docs [impact: critical, effort: low]

2. Remediate SEO/GEO issues on the 20.13% flagged pages (~460 pages) focusing on missing meta descriptions, title tags, and heading structure [impact: high, effort: medium]

3. Add last-updated timestamps to all 2,286 pages (currently 3.37% coverage) via automated frontmatter injection from Git history [impact: high, effort: low]

4. Close the 33.33% API reference coverage gap by documenting missing endpoints/methods across the 1,534 detected API pages [impact: high, effort: high]

5. Instrument server-side rendered or static code example extraction to replace 0% example reliability detection and enable automated testing [impact: medium, effort: medium]

Expert Analysis: Strengths and Risks

Strengths

+ Complete crawl coverage at 100% (2,286 of 2,369 requested pages indexed)
+ High citationability at 99.87% and answerability at 98.64%, supporting AI retrieval use cases
+ 1,534 API pages detected with 66.67% reference coverage, indicating substantial API surface documentation
+ 90% actionability coverage shows strong task-oriented content
+ Zero repository navigation broken links (repo_broken_links_count: 0), isolating issues to user-facing docs only

Risks

- 61 confirmed broken internal links in user-facing docs degrade trust, SEO authority, and user navigation success
- 20.13% SEO/GEO issue rate threatens organic discoverability and search ranking across ~460 pages
- 68.64% stale-risk pages (1,569 pages) may contain outdated information, eroding user confidence and AI answer quality
- Only 3.37% last-updated coverage (77 pages) prevents users and LLMs from assessing content freshness
- 0% example reliability likely reflects JS-rendered code block detection failure, masking true code example health and blocking automated testing
- 21 unverified links due to auth/rate-limit/server blocks create uncertainty in link health reporting
- 11.71% evidence coverage (39 of 333 claims) leaves 294 key claims unsupported, weakening trust and answer grounding for RAG systems

Limitations

* External audit cannot verify content technical accuracy, correctness of code examples, or alignment with current product behavior.
* 21 unverified links due to authentication, rate limiting, or server blocks may include false negatives; manual review required for final link health assessment.
* 0% example reliability likely reflects JS-rendered code block detection limitation rather than true absence; client-side rendering prevents automated code extraction and testing without instrumentation changes.
* Stale-risk percentage (68.64%) is inferred from missing last-updated metadata and does not confirm actual content obsolescence; manual subject-matter review needed for true freshness validation.
* Evidence coverage (11.71%) measures presence of citations/references but does not assess quality, relevance, or correctness of linked evidence.

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	85.0
support_hourly_usd	55.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	6.0
avg_release_delay_hours	18.0
monthly_support_tickets	320.0
docs_related_ticket_share	0.28
avg_ticket_handling_minutes	22.0
monthly_doc_influenced_evals	45.0
eval_to_customer_rate	0.18
avg_customer_monthly_value_usd	2400.0
docs_friction_revenue_sensitivity	0.35

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH

F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	LOW

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
