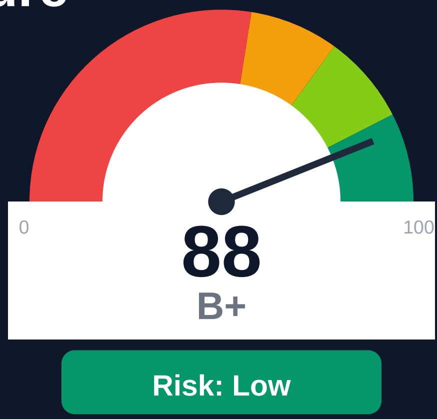
Codefresh

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-05-05 10:18 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY



Key Metrics

Pages scanned: 953

Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 1
- Link verification inconclusive for 279 URLs (auth/rate-limit/server block); these are excluded from broken-link counts.
- SEO/GEO issue rate is high: 12.91%
- Freshness visibility is weak: only 36.73% pages show last updated

Executive Summary

88

B+

Documentation audit of codefresh.io/docs crawled 953 pages from a discovered 967 pages (100% crawl coverage). One confirmed broken internal documentation link was detected. API reference coverage is complete at 100% (139 API pages detected). Example code reliability is estimated at 70.71%, and only 36.73% of pages display last-updated metadata. Overall audit confidence is 63.5%, with link verification confidence at 25% due to 279 unverified URLs blocked by authentication or rate-limiting.

External posture: SEO/GEO issue rate **12.9%**, public API coverage **100.0%**, broken links **1**.

88 Audit Score	**B+** Grade	**Low** Risk Band
953 Pages Scanned	**1** Broken Links	**12.9%** SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://codefresh.io/docs	953	1	100.0	70.7	12.9

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	**92+**	**-4**
Industry average (developer docs)	**85**	**+3**
Minimum acceptable	**70**	**+18**
Your score	**88**	**-**

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
$140,822 annual exposure	**$249,513** annual exposure	**$431,728** annual exposure
Remediation: **$2,090** Monthly loss: **$4,125** Opportunity: **$7,436**/mo	Remediation: **$5,445** Monthly loss: **$12,903** Opportunity: **$7,436**/mo	Remediation: **$8,800** Monthly loss: **$27,808** Opportunity: **$7,436**/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	$1,782	$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	$1,122	$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	$2,257	$990
F-API-COVERAGE	Undocumented API operations	LOW	$2,904	$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	$2,244	$935
F-DRIFT	Code/docs contract drift	LOW	$1,901	$660
F-TERMINOLOGY	Terminology inconsistency	LOW	$693	$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Investigate and resolve 279 unverified links; implement monitoring for authentication-gated and external link health [impact: critical, effort: high]

2. Add or expose last-updated metadata on remaining 63.27% of pages to improve content trust and maintenance visibility [impact: high, effort: medium]

3. Audit and fix example code reliability: validate, test, and update the ~30% of examples flagged as potentially unreliable [impact: high, effort: high]

4. Address SEO/GEO issues affecting 12.91% of pages (123 pages): fix meta tags, descriptions, and geo-targeting configuration [impact: high, effort: medium]

5. Fix the 1 confirmed broken internal documentation link and review the 10 trap URLs for navigation improvements [impact: medium, effort: low]

Expert Analysis: Strengths and Risks

Strengths

+ Complete crawl coverage: 100% of in-scope pages (953/955) successfully crawled
+ Full API reference coverage: 100% with 139 API pages detected and validated
+ Minimal broken links: only 1 confirmed broken internal documentation link
+ No repository navigation link breakage (0 repo_broken_links_count)
+ Large documentation footprint with 953 pages providing comprehensive product coverage

Risks

- Low link verification confidence (25%): 279 URLs could not be verified due to authentication, rate-limiting, or server blocks; actual broken link count may be higher
- High SEO/GEO issue rate at 12.91% may impact discoverability and search ranking
- Weak freshness visibility: only 36.73% of pages display last-updated dates, obscuring content currency for users
- Example code reliability at 70.71% indicates approximately 30% of code examples may be outdated, incorrect, or non-functional
- Overall audit confidence of 63.5% suggests moderate uncertainty in findings
- 1,355 links excluded from analysis may hide additional quality issues
- 10 trap URLs skipped during crawl may indicate navigation or URL structure problems

Limitations

* External audit cannot verify 279 links blocked by authentication, rate-limiting, or server restrictions; actual broken link count may be underreported
* Example code reliability is estimated through heuristic analysis; actual runtime validity requires manual testing in target environments
* Audit cannot assess content accuracy, completeness of feature coverage, or alignment with current product versions
* Freshness analysis depends on visible metadata; pages without last-updated dates may still be current but are flagged as unknown
* SEO/GEO issue detection is technical only; business impact on search rankings and user acquisition requires analytics correlation

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
