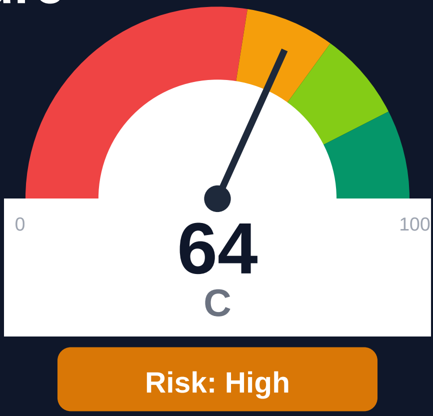
Runware

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-04-25 17:14 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY



Key Metrics

Pages scanned: 746

Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 37
- SEO/GEO issue rate is high: 21.78%
- API usage-doc coverage is low: 0.0% (10 API pages detected)
- Freshness visibility is weak: only 41.69% pages show last updated

Executive Summary

64

C

Documentation audit of runware.ai/docs crawled 746 pages with 100% coverage across 747 discovered pages. Critical issues include 37 confirmed broken internal links all within user-facing documentation, 0% API reference coverage despite 10 API pages detected, and high SEO/metadata issues affecting 21.78% of pages. Freshness tracking is limited with only 41.69% of pages displaying last-updated timestamps. Overall confidence is 81% with API coverage confidence at 55% indicating potential detection gaps. Example code reliability estimated at 77.27%.

External posture: SEO/GEO issue rate **21.8%**, public API coverage **0.0%**, broken links **37**.

64 Audit Score	C Grade	High Risk Band
746 Pages Scanned	37 Broken Links	21.8% SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://runware.ai/docs	746	37	0.0	77.3	21.8

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	**92+**	**-28**
Industry average (developer docs)	**85**	**-22**
Minimum acceptable	**70**	**-6**
Your score	**64**	**-**

Gap to industry average: **22 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Board-Level Metrics

API Coverage (Public)

0.0%

SEO/GEO Issue Rate (lower is better)

21.8%

Example Reliability (estimate)

77.3%

Freshness Visibility (last-updated metadata)

41.7%

Internal Metrics (from scorecard)

API Coverage (Internal)

0.0%

Example Reliability (Internal)

100.0%

Docs-Contract Drift

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
$140,822 annual exposure	**$249,513** annual exposure	**$431,728** annual exposure
Remediation: **$2,090** Monthly loss: **$4,125** Opportunity: **$7,436**/mo	Remediation: **$5,445** Monthly loss: **$12,903** Opportunity: **$7,436**/mo	Remediation: **$8,800** Monthly loss: **$27,808** Opportunity: **$7,436**/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	$1,782	$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	$1,122	$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	$2,257	$990
F-API-COVERAGE	Undocumented API operations	LOW	$2,904	$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	$2,244	$935
F-DRIFT	Code/docs contract drift	LOW	$1,901	$660
F-TERMINOLOGY	Terminology inconsistency	LOW	$693	$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Repair all 37 confirmed broken internal documentation links to restore navigation integrity [impact: critical, effort: low]

2. Audit and expand API reference documentation to cover detected endpoints and improve 0% coverage baseline [impact: critical, effort: high]

3. Implement last-updated timestamps on remaining 58.31% of pages to establish freshness visibility [impact: high, effort: medium]

4. Remediate SEO/metadata issues affecting 21.78% of pages (approximately 162 pages) to improve discoverability [impact: high, effort: medium]

5. Review and update code examples in lower 22.73% reliability segment to achieve 90%+ reliability target [impact: medium, effort: medium]

Expert Analysis: Strengths and Risks

Strengths

+ Complete crawl coverage at 100% with all 747 discovered pages successfully examined
+ No repository navigation link breakage (0 repo_broken_links_count)
+ No trap URLs or crawl scope issues encountered during examination
+ Example code reliability above 75% threshold at 77.27%
+ High overall audit confidence at 81% with links verification at 95%

Risks

- 37 confirmed broken internal links in user-facing documentation degrading navigation and user experience
- Zero API reference coverage (0.0%) despite 10 API pages detected indicates missing or incomplete API documentation
- API detection confidence only 55% suggests potential undercounting of API endpoints or documentation gaps
- SEO/metadata issues on 21.78% of pages harm discoverability and search ranking
- 58.31% of pages lack last-updated timestamps preventing users from assessing content currency
- Example reliability at 77.27% means approximately 1 in 4-5 code samples may be outdated or non-functional
- Single-product topology with 746 pages creates high impact radius for systemic issues

Limitations

* External audit cannot verify actual functionality of code examples or API endpoints, only structural presence and syntax patterns
* API coverage detection at 55% confidence may undercount endpoints if non-standard documentation patterns or dynamic content are used
* Freshness assessment relies on visible timestamps only; actual content currency requires subject matter expert review
* Link verification confirms HTTP responses but cannot validate semantic correctness of link destinations or content relevance
* Example reliability is estimated through heuristics; actual executability requires environment-specific testing with live API credentials

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
