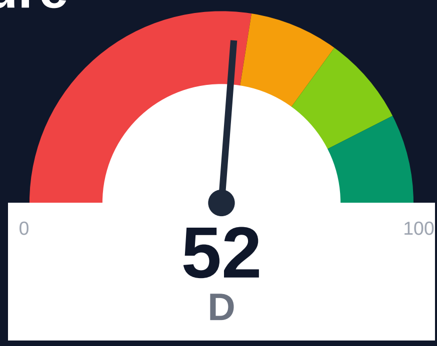
ScandIt

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-06-18 17:21 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY



Risk: Critical

Key Metrics

Pages scanned: 1580

Report type: Premium Executive Audit

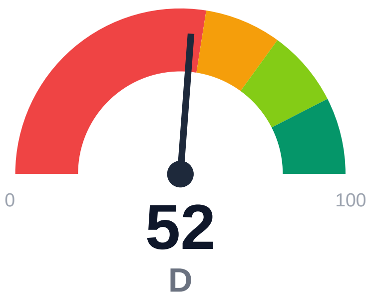
Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 128
- Link verification inconclusive for 35 URLs (auth/rate-limit/server block); these are exclu
- API usage-doc coverage is low: 30.92% (62 API pages detected)
- Freshness visibility is weak: only 3.23% pages show last updated

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary



Documentation audit across 2 sites (docs.scandit.com, support.scandit.com) crawled 1,580 pages with 100% coverage. Critical issues: 128 confirmed broken internal links degrading user trust and navigation; API reference coverage at only 30.92% (62 API pages detected) limiting developer onboarding; freshness timestamps visible on just 3.23% of pages creating stale-content perception; retrieval readiness scored 78.88/100 (moderate band) with 77.8% stale-risk flagged. Strengths include 89.3% claims backed by evidence, 87.87% example reliability, and zero repository broken links.

External posture: SEO/GEO issue rate **3.4%**, public API coverage **30.9%**, broken links **128**.

52 Audit Score	**F** Grade	**Critical** Risk Band
1580 Pages Scanned	**128** Broken Links	**3.4%** SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://support.scandit.com/	118	97	23.6	92.7	26.1
https://docs.scandit.com/	1462	31	37.5	87.5	1.6

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	**92+**	**-40**
Industry average (developer docs)	**85**	**-33**
Minimum acceptable	**70**	**-18**
Your score	**52**	**-**

Gap to industry average: **33 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Board-Level Metrics

API Coverage (Public)

30.9%

SEO/GEO Issue Rate (lower is better)

3.4%

Example Reliability (estimate)

87.9%

Freshness Visibility (last-updated metadata)

3.2%

Internal Metrics (from scorecard)

API Coverage (Internal)

23.6%

Example Reliability (Internal)

92.7%

Docs-Contract Drift

35.8%

Pipeline Opportunity Fit (Deterministic)

This section maps cold-audit signals to problem classes that the pipeline can remediate directly. No LLM inference is used in this mapping.

LLM Retrieval Readiness (deterministic proxy)

78.9%

Audit Confidence (crawl scope + verification quality)

90.0%

Readiness band: **Moderate**. Confidence: **High**. Open remediation opportunities: **3**.

SEO/GEO Quality Signal (inverse issue rate)

86.4%

Example Reliability Signal

87.9%

Freshness Visibility Signal

3.2%

API Coverage Signal

30.9%

LLM retrieval readiness breakdown (deterministic)

Chunkability

72.9%

Answerability

100.0%

Citationability

100.0%

Stale Risk (inverse)

22.2%

Evidence coverage: **89.3%** (3012/3373 key claims backed by deterministic evidence signals).

Highest-value remediation targets

Problem	Severity	Pipeline solution path
Internal documentation link integrity issues	HIGH	Weekly link governance via automated audits and consolidated remediation queue
Weak freshness and lifecycle visibility	MEDIUM	Lifecycle management, stale detection, and weekly governance cadence
API reference coverage and drift risk	HIGH	API-first contract flow, validators, regression gates, and drift checks

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
$181,650 annual exposure	**$265,639** annual exposure	**$406,441** annual exposure
Remediation: **$1,615** Monthly loss: **$3,188** Opportunity: **$11,815**/mo	Remediation: **$4,208** Monthly loss: **$9,970** Opportunity: **$11,815**/mo	Remediation: **$6,800** Monthly loss: **$21,488** Opportunity: **$11,815**/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-API-COVERAGE	Undocumented API operations	HIGH	$2,244	$850
F-FRESHNESS	Documentation freshness debt	HIGH	$867	$425
F-DRIFT	Code/docs contract drift	HIGH	$1,469	$510
F-LAYERS	Missing required doc layers	HIGH	$1,377	$638
F-RETRIEVAL	RAG retrieval quality risk	HIGH	$1,744	$765
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	$1,734	$722
F-TERMINOLOGY	Terminology inconsistency	LOW	$536	$298

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-API-COVERAGE	Undocumented API operations	HIGH
F-FRESHNESS	Documentation freshness debt	HIGH
F-DRIFT	Code/docs contract drift	HIGH
F-LAYERS	Missing required doc layers	HIGH
F-RETRIEVAL	RAG retrieval quality risk	HIGH

Recommended Actions

1. Fix all 128 confirmed broken internal documentation links [impact: critical, effort: medium]

2. Add last-updated timestamps to all pages (currently 3.23% coverage) via automated build pipeline injection [impact: high, effort: low]

3. Expand API reference documentation from 30.92% to 60%+ coverage, prioritizing top 10 SDK methods by support ticket volume [impact: critical, effort: high]

4. Improve chunkability from 72.91% to 85%+ by breaking long-form pages into semantic sections with clear headings [impact: high, effort: medium]

5. Resolve 35 unverified links by implementing authenticated link-check workflow or whitelisting known-good domains [impact: medium, effort: low]

Expert Analysis: Strengths and Risks

Strengths

+ Zero repository navigation broken links; all 128 broken links are user-facing documentation links
+ 89.3% of key claims (3,012 of 3,373 detected) supported by evidence, strengthening technical credibility
+ 87.87% example reliability estimate indicates code samples are generally trustworthy
+ 100% crawl coverage (1,580 of 1,580 pages) with high confidence (95%) ensures comprehensive audit
+ Multi-project topology correctly configured; no fragmentation penalty applied despite split across 2 domains

Risks

- 128 confirmed broken internal links create friction in user journeys, erode trust, and damage SEO authority
- API reference coverage at 30.92% leaves 69% of API surface undocumented, blocking developer self-service and AI answer quality
- Only 3.23% of pages display last-updated timestamps, preventing users from assessing content currency and increasing perceived staleness
- 77.8% stale-risk flag in retrieval readiness suggests large portions may appear outdated to LLM-based tools and search engines
- 35 unverified links (auth/rate-limit blocks) represent unknown risk; actual broken count may be higher
- Chunkability at 72.91% limits effectiveness for RAG pipelines and AI-assisted support tooling
- Actionability coverage at 73.76% means 26% of pages lack clear next steps, reducing conversion from docs to product usage

Limitations

* External audit cannot verify content technical accuracy, only structural and linking integrity; subject-matter review required for correctness.
* 35 unverified links (blocked by auth/rate-limits) represent unknown risk; actual broken link count may be higher than 128.
* API coverage detection relies on heuristic page classification; 30.92% figure assumes detected API pages are representative, but some API docs may be misclassified as guides.
* Stale-risk percentage (77.8%) is inferred from missing timestamps and retrieval signals, not actual content age; manual freshness audit needed for ground truth.
* Crawl confidence at 95% and link confidence at 73.53% indicate some edge cases or dynamic content may be underrepresented in findings.

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	85.0
support_hourly_usd	55.0
release_count_per_month	4.0
baseline_manual_sync_hours_per_week	6.0
avg_release_delay_hours	18.0
monthly_support_tickets	320.0
docs_related_ticket_share	0.28
avg_ticket_handling_minutes	22.0
monthly_doc_influenced_evals	45.0
eval_to_customer_rate	0.18
avg_customer_monthly_value_usd	3200.0
docs_friction_revenue_sensitivity	0.35

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	MEDIUM
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH

F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	LOW

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
