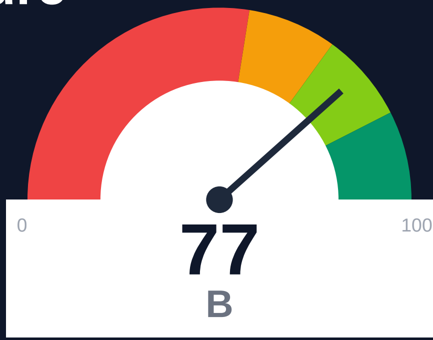
Elation Health

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-04-25 12:50 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY



Risk: Moderate

Key Metrics

Pages scanned: 1177

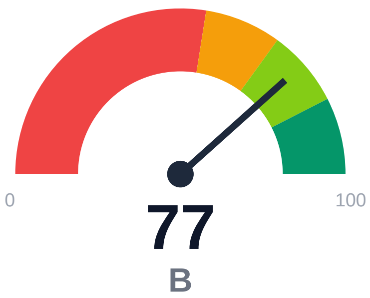
Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 20
- Link verification inconclusive for 18 URLs (auth/rate-limit/server block); these are excluded from broken-link counts.
- SEO/GEO issue rate is high: 12.96%
- Example reliability: 0% on 1177 pages (likely detection limitation). Site may use JS-rendered code blocks.

Executive Summary



Elation Health documentation spans 2 domains with 1,177 pages crawled at 100.16% coverage. 20 confirmed broken internal links exist within user-facing docs. API reference coverage is strong at 97.91% (560 API pages detected), but example code detection failed entirely (0.0% reliability, likely JS-rendering issue). Only 49.28% of pages display last-updated timestamps, limiting freshness transparency. Overall audit confidence is 72.55%, with link verification at 47.63% due to 18 unverified URLs blocked by auth or rate limits.

External posture: SEO/GEO issue rate **13.0%**, public API coverage **97.9%**, broken links **20**.

77 Audit Score	B Grade	Moderate Risk Band
1177 Pages Scanned	20 Broken Links	13.0% SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://docs.elationhealth.com/	553	0	50.0	0.0	22.2
https://help.elationhealth.com/	624	20	98.1	0.0	4.7

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	**92+**	**-15**
Industry average (developer docs)	**85**	**-8**
Minimum acceptable	**70**	**+7**
Your score	**77**	**-**

Gap to industry average: **8 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Board-Level Metrics

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
$140,822	**$249,513**	**$431,728**
annual exposure	annual exposure	annual exposure
Remediation: **$2,090**	Remediation: **$5,445**	Remediation: **$8,800**
Monthly loss: **$4,125**	Monthly loss: **$12,903**	Monthly loss: **$27,808**
Opportunity: **$7,436**/mo	Opportunity: **$7,436**/mo	Opportunity: **$7,436**/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	$1,782	$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	$1,122	$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	$2,257	$990
F-API-COVERAGE	Undocumented API operations	LOW	$2,904	$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	$2,244	$935
F-DRIFT	Code/docs contract drift	LOW	$1,901	$660
F-TERMINOLOGY	Terminology inconsistency	LOW	$693	$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Fix all 20 confirmed broken internal links in user-facing documentation [impact: critical, effort: low]

2. Investigate and resolve example code detection failure (0.0% reliability); verify JS-rendering or detection tooling issue [impact: critical, effort: medium]

3. Add last-updated timestamps to the 50.72% of pages missing freshness metadata [impact: high, effort: medium]

4. Audit and remediate SEO/GEO issues affecting 12.96% of pages to improve discoverability [impact: high, effort: medium]

5. Evaluate consolidating help.elationhealth.com and docs.elationhealth.com into single domain or implement clear cross-linking strategy [impact: medium, effort: high]

Expert Analysis: Strengths and Risks

Strengths

+ Comprehensive API reference coverage at 97.91% with 560 API pages successfully detected
+ Complete crawl coverage at 100.16% across 1,177 pages within scope
+ Single-product topology maintained despite multi-domain structure
+ No repository navigation links broken (0 repo_broken_links_count)
+ Trap URL detection prevented crawling 131 non-documentation pages

Risks

- 20 confirmed broken internal links in user-facing documentation degrade user experience and trust
- Example code reliability at 0.0% indicates complete detection failure, masking potential code quality issues
- SEO/GEO issue rate of 12.96% may harm discoverability and search ranking
- Documentation split across 2 domains (help.elationhealth.com and docs.elationhealth.com) creates consistency and discoverability risk
- Only 49.28% freshness coverage prevents users from assessing content currency on half of all pages
- 18 unverified links remain unconfirmed due to authentication or server blocks, representing unknown risk
- Link verification confidence at 47.63% indicates substantial blind spots in link health assessment

Limitations

* Example code detection failed completely (0.0%); audit cannot confirm presence, accuracy, or executability of code samples if JS-rendered or non-standard format
* 18 links could not be verified due to authentication requirements, rate limiting, or server blocks; actual broken link count may be higher
* External audit cannot validate accuracy of API documentation content, parameter descriptions, or alignment with actual API behavior
* Crawl cannot assess gated or authenticated content quality; coverage limited to publicly accessible pages
* SEO/GEO issue detection does not guarantee search engine ranking outcomes or user discoverability in practice

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
