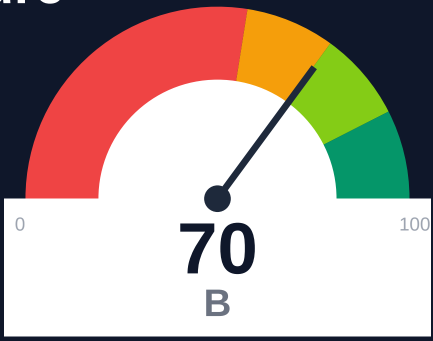
Tiptap

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-04-29 12:56 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY



Risk: Moderate

Key Metrics

Pages scanned: 704

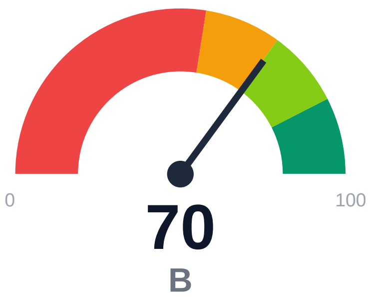
Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 2
- Link verification inconclusive for 3 URLs (auth/rate-limit/server block); these are excluded from broken-link counts.
- API usage-doc coverage is low: 25.0% (158 API pages detected)
- Example reliability estimate is low: 39.39%

Executive Summary



Audit of tiptap.dev/docs covered 704 pages across multi-project topology with 100% crawl coverage and 67.5% overall confidence. Critical gaps identified: only 25% of 158 detected API pages have adequate usage documentation, and example reliability stands at 39.39%. Freshness metadata is present on only 9.52% of pages, limiting maintenance visibility. Link health is strong with only 2 confirmed broken internal links. SEO/geo issues affect 9.45% of content.

External posture: SEO/GEO issue rate **9.4%**, public API coverage **25.0%**, broken links **2**.

70 Audit Score	**B** Grade	**Moderate** Risk Band
704 Pages Scanned	**2** Broken Links	**9.4%** SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://tiptap.dev/docs	704	2	25.0	39.4	9.4

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	**92+**	**-22**
Industry average (developer docs)	**85**	**-15**
Minimum acceptable	**70**	**+0**
Your score	**70**	**-**

Gap to industry average: **15 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Board-Level Metrics

API Coverage (Public) **25.0%**

SEO/GEO Issue Rate (lower is better) **9.4%**

Example Reliability (estimate) **39.4%**

Freshness Visibility (last-updated metadata) **9.5%**

Internal Metrics (from scorecard)

API Coverage (Internal) **0.0%**

Example Reliability (Internal) **100.0%**

Docs-Contract Drift **0.0%**

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
$140,822 annual exposure	**$249,513** annual exposure	**$431,728** annual exposure
Remediation: **$2,090** Monthly loss: **$4,125** Opportunity: **$7,436**/mo	Remediation: **$5,445** Monthly loss: **$12,903** Opportunity: **$7,436**/mo	Remediation: **$8,800** Monthly loss: **$27,808** Opportunity: **$7,436**/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	$1,782	$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	$1,122	$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	$2,257	$990
F-API-COVERAGE	Undocumented API operations	LOW	$2,904	$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	$2,244	$935
F-DRIFT	Code/docs contract drift	LOW	$1,901	$660
F-TERMINOLOGY	Terminology inconsistency	LOW	$693	$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Implement automated last-updated timestamps across all 704 pages to address 90.48% freshness gap [impact: critical, effort: low]

2. Expand API usage documentation for 119 undocumented API pages (75% of 158 detected) with integration examples and common patterns [impact: critical, effort: high]

3. Establish automated example testing pipeline to improve 39.39% reliability score and prevent code rot [impact: critical, effort: medium]

4. Fix 2 confirmed broken internal documentation links and investigate 3 unverified URLs blocked by auth/rate-limits [impact: high, effort: low]

5. Remediate SEO/geo issues affecting 9.45% of pages to improve search visibility and international accessibility [impact: medium, effort: medium]

Expert Analysis: Strengths and Risks

Strengths

+ Complete crawl coverage achieved (704/704 pages, 100%)
+ Minimal broken links with only 2 confirmed broken internal documentation links
+ High crawl confidence at 95% and API detection confidence at 85%
+ No repository navigation link breakage (0 repo_broken_links_count)
+ Comprehensive API page detection with 158 pages identified

Risks

- API reference coverage critically low at 25%, leaving 75% of API pages without adequate usage documentation
- Example reliability at 39.39% indicates majority of code examples may be outdated, untested, or non-functional
- Freshness metadata missing on 90.48% of pages, preventing users from assessing content currency
- Overall confidence at 67.5% suggests moderate reliability concerns in audit findings
- Links confidence at 35% indicates potential undetected link issues due to auth/rate-limit barriers (3 unverified URLs)
- SEO/geo issues at 9.45% may impact discoverability and international reach
- Multi-project topology increases maintenance complexity and documentation drift risk

Limitations

* External audit cannot verify runtime correctness of code examples or guarantee they execute in actual development environments
* 3 links remain unverified due to authentication, rate-limiting, or server blocks; actual broken link count may be higher
* API coverage assessment relies on automated detection patterns which may misclassify pages or miss unconventional API documentation structures
* Freshness analysis only detects visible metadata; actual content currency requires subject matter expert review
* Multi-project topology may contain cross-project dependencies and version compatibility issues not detectable through documentation structure alone

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
