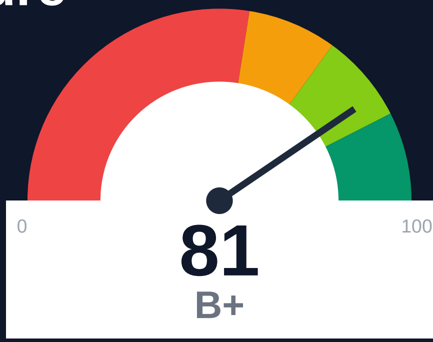
Daily.co

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-04-30 10:03 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY



Risk: Moderate

Key Metrics

Pages scanned: 584

Report type: Premium Executive Audit

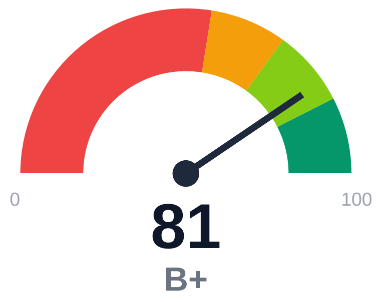
Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 31
- Link verification inconclusive for 2 URLs (auth/rate-limit/server block); these are excluded from broken-link counts.
- API usage-doc coverage is low: 14.52% (447 API pages detected)

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary



Documentation audit of docs.daily.co crawled 584 pages with 100% coverage of discovered content. The site contains 31 confirmed broken internal documentation links requiring immediate remediation. API reference coverage is critically low at 14.52% despite 447 API pages detected, indicating significant gaps in usage documentation. Example code reliability is strong at 93.48%, and freshness metadata coverage is complete at 100%. Overall audit confidence stands at 89.08%.

External posture: SEO/GEO issue rate **1.4%**, public API coverage **14.5%**, broken links **31**.

81 Audit Score	**B+** Grade	**Moderate** Risk Band
584 Pages Scanned	**31** Broken Links	**1.4%** SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://docs.daily.co/	584	31	14.5	93.5	1.4

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	**92+**	**-11**
Industry average (developer docs)	**85**	**-4**
Minimum acceptable	**70**	**+11**
Your score	**81**	**-**

Gap to industry average: **4 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
$140,822 annual exposure	**$249,513** annual exposure	**$431,728** annual exposure
Remediation: **$2,090** Monthly loss: **$4,125** Opportunity: **$7,436**/mo	Remediation: **$5,445** Monthly loss: **$12,903** Opportunity: **$7,436**/mo	Remediation: **$8,800** Monthly loss: **$27,808** Opportunity: **$7,436**/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	$1,782	$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	$1,122	$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	$2,257	$990
F-API-COVERAGE	Undocumented API operations	LOW	$2,904	$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	$2,244	$935
F-DRIFT	Code/docs contract drift	LOW	$1,901	$660
F-TERMINOLOGY	Terminology inconsistency	LOW	$693	$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Repair all 31 confirmed broken internal documentation links to restore navigation integrity [impact: critical, effort: low]

2. Expand API usage documentation from 14.52% to minimum 70% coverage across 447 detected API pages [impact: critical, effort: high]

3. Investigate and resolve 2 unverified links blocked by auth/rate-limits to complete link audit [impact: medium, effort: low]

4. Audit 23 trap URLs skipped to identify and fix pagination or crawl architecture issues [impact: medium, effort: medium]

5. Address SEO/geo issues affecting 1.41% of pages to improve regional discoverability [impact: low, effort: low]

Expert Analysis: Strengths and Risks

Strengths

+ Complete crawl coverage at 100% of 584 discovered pages with no scope limitations
+ Strong example code reliability at 93.48% across detected samples
+ Full freshness metadata coverage at 100% enabling content maintenance tracking
+ Zero broken repository navigation links, keeping internal workflows intact
+ High overall audit confidence at 89.08% with strong crawl confidence at 95%

Risks

- 31 confirmed broken internal documentation links degrading user navigation and trust
- Critically low API reference coverage at 14.52% leaving 85% of API surface undocumented for usage
- 447 API pages detected but minimal accompanying usage documentation creates integration friction
- 2 unverified links due to authentication or rate-limiting may hide additional broken links
- SEO/geo issues present at 1.41% rate potentially affecting discoverability in key markets
- API confidence at 85% suggests potential detection gaps in coverage measurement
- 23 trap URLs skipped during crawl may indicate pagination or infinite scroll issues

Limitations

* External audit cannot verify content accuracy, technical correctness, or completeness of implementation details
* Authentication-protected pages and rate-limited endpoints (2 unverified links) may hide additional broken links or coverage gaps
* API coverage detection relies on pattern matching and may undercount or misclassify reference vs usage documentation
* Example code reliability is estimated through static analysis and cannot guarantee runtime execution success or environment compatibility

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
