

Coolify

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-06-30 14:16 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY

Risk: High

Key Metrics

Pages scanned: 480

Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 1
- Example reliability estimate is low: 0.0%
- Freshness visibility is weak: only 1.04% pages show last updated

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary

Coolify documentation spans 480 pages with 100% crawl coverage and strong retrieval readiness (86.77 overall score). Critical gaps: 0% example reliability estimate, 1.04% last-updated coverage, and 69.27% of pages flagged with stale risk. API reference coverage is solid at 85.47% across 20 detected pages. Evidence coverage stands at 59.2% (222 of 375 key claims backed), and 75% actionability coverage indicates reasonable user guidance.

External posture: SEO/GEO issue rate **1.7%**, public API coverage **85.5%**, broken links **1**.

56 Audit Score	F Grade	High Risk Band
480 Pages Scanned	1 Broken Links	1.7% SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://coolify.io/docs	480	1	85.5	0.0	1.7

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	92+	-36
Industry average (developer docs)	85	-29
Minimum acceptable	70	-14
Your score	56	-

Gap to industry average: **29 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Board-Level Metrics

Internal Metrics (from scorecard)

Pipeline Opportunity Fit (Deterministic)

This section maps cold-audit signals to problem classes that the pipeline can remediate directly. No LLM inference is used in this mapping.

LLM retrieval readiness breakdown (deterministic)

Evidence coverage: 59.2% (222/375 key claims backed by deterministic evidence signals).

Highest-value remediation targets

Problem	Severity	Pipeline solution path
Internal documentation link integrity issues	MEDIUM	Weekly link governance via automated audits and consolidated remediation queue
Code example reliability risk	HIGH	Snippet lint + smoke checks + protocol self-verify coverage
Weak freshness and lifecycle visibility	MEDIUM	Lifecycle management, stale detection, and weekly governance cadence

Financial Exposure Model

Low Estimate \$149,758 annual exposure Remediation: \$1,615 Monthly loss: \$3,188 Opportunity: \$9,158/mo	Base Estimate \$233,746 annual exposure Remediation: \$4,208 Monthly loss: \$9,970 Opportunity: \$9,158/mo	High Estimate \$374,549 annual exposure Remediation: \$6,800 Monthly loss: \$21,488 Opportunity: \$9,158/mo
---	--	---

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	HIGH	\$1,734	\$722
F-FRESHNESS	Documentation freshness debt	HIGH	\$867	\$425
F-DRIFT	Code/docs contract drift	HIGH	\$1,469	\$510
F-RETRIEVAL	RAG retrieval quality risk	HIGH	\$1,744	\$765
F-LAYERS	Missing required doc layers	MEDIUM	\$1,377	\$638
F-API-COVERAGE	Undocumented API operations	LOW	\$2,244	\$850
F-TERMINOLOGY	Terminology inconsistency	LOW	\$536	\$298

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	HIGH
F-FRESHNESS	Documentation freshness debt	HIGH
F-DRIFT	Code/docs contract drift	HIGH
F-RETRIEVAL	RAG retrieval quality risk	HIGH
F-LAYERS	Missing required doc layers	MEDIUM

Recommended Actions

1. Add last-updated timestamps to all 475 pages currently missing them (raise from 1.04% to 100%) [impact: high, effort: low]
2. Audit and validate code examples across all 480 pages to establish baseline reliability above 0% [impact: critical, effort: high]

3. Backfill evidence for the 153 unsupported claims (40.8% gap) prioritizing API and integration pages [impact: high, effort: medium]
4. Fix the 1 confirmed broken internal link and audit link health on top 50 landing pages [impact: medium, effort: low]
5. Add clear next-step CTAs to the 25% of pages with actionability gaps, focusing on getting-started and integration flows [impact: medium, effort: medium]

Expert Analysis: Strengths and Risks

Strengths

- + Complete crawl coverage (480/480 pages, 100%) with no trap URLs or scope issues
- + Strong retrieval readiness band (86.77 score) with 98.75% answerability and 98.96% citationability
- + API reference coverage at 85.47% with 20 pages detected, no detection issues flagged
- + Minimal broken links (1 docs-facing link, 0 repository navigation links)
- + High chunkability at 94.58%, supporting AI and search use cases

Risks

- 0% example reliability estimate across 480 pages suggests no validated code samples or detection failure
- 69.27% stale risk rate indicates majority of content lacks freshness signals, undermining trust
- Only 1.04% last-updated coverage (5 pages) leaves users unable to assess currency of 475 pages
- 40.8% of key claims (153 of 375) lack evidence, risking credibility and support escalations
- 25% actionability gap means one-quarter of pages may lack clear next steps for users
- 1.72% SEO/geo issue rate may limit discoverability in search and regional contexts
- Single confirmed broken internal link may cascade into user confusion if on high-traffic page

Limitations

- * External audit cannot verify runtime correctness of code examples or test actual execution in user environments; 0% reliability estimate may reflect detection limits rather than true sample quality.
- * Stale risk and freshness metrics rely on visible timestamps and heuristics; pages may be current but lack machine-readable signals, inflating perceived staleness.
- * Evidence and actionability scoring depends on content structure patterns; non-standard formatting may cause under-detection of valid claims or CTAs.
- * Crawl confidence at 95% and API confidence at 85% indicate possible missed pages or API endpoints in dynamic or JavaScript-heavy sections.

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	85.0
support_hourly_usd	45.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	3.0
avg_release_delay_hours	18.0
monthly_support_tickets	320.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	18.0
monthly_doc_influenced_evals	145.0
eval_to_customer_rate	0.12
avg_customer_monthly_value_usd	280.0
docs_friction_revenue_sensitivity	0.15

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH

F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	LOW
--	-----------------------------------	-----

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
