

100ms

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-04-30 10:25 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY

Key Metrics

Pages scanned: 643

Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 31
- Link verification inconclusive for 5 URLs (auth/rate-limit/server block); these are excluded from broken-link counts.
- Freshness visibility is weak: only 20.84% pages show last updated

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary

Documentation audit of 100ms.live/docs covered 643 pages (100% of discovered scope) with 85.94% overall confidence. Critical issues include 31 confirmed broken internal documentation links and weak freshness visibility at 20.84% coverage. API reference coverage stands at 75.37% across 154 detected API pages. Example code reliability estimates at 90.6%, indicating generally healthy code samples. 5 links remain unverified due to authentication or rate-limiting barriers.

External posture: SEO/GEO issue rate **4.3%**, public API coverage **75.4%**, broken links **31**.

91 Audit Score	A Grade	Low Risk Band
643 Pages Scanned	31 Broken Links	4.3% SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://www.100ms.live/docs	643	31	75.4	90.6	4.3

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	92+	-1
Industry average (developer docs)	85	+6
Minimum acceptable	70	+21
Your score	91	-

Board-Level Metrics

Internal Metrics (from scorecard)

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
\$140,822 annual exposure	\$249,513 annual exposure	\$431,728 annual exposure
Remediation: \$2,090 Monthly loss: \$4,125 Opportunity: \$7,436/mo	Remediation: \$5,445 Monthly loss: \$12,903 Opportunity: \$7,436/mo	Remediation: \$8,800 Monthly loss: \$27,808 Opportunity: \$7,436/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	\$1,782	\$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	\$1,122	\$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	\$2,257	\$990
F-API-COVERAGE	Undocumented API operations	LOW	\$2,904	\$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	\$2,244	\$935
F-DRIFT	Code/docs contract drift	LOW	\$1,901	\$660
F-TERMINOLOGY	Terminology inconsistency	LOW	\$693	\$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Fix all 31 confirmed broken internal documentation links to restore navigation integrity [impact: critical, effort: medium]

2. Implement last-updated timestamps on 79.16% of pages currently missing freshness indicators [impact: high, effort: low]
3. Close 24.63% API reference coverage gap by documenting missing endpoints or improving detection [impact: high, effort: high]
4. Investigate and resolve 5 unverified links blocked by authentication or rate-limiting [impact: medium, effort: low]
5. Establish automated link checking in CI/CD to prevent future broken link accumulation [impact: high, effort: medium]

Expert Analysis: Strengths and Risks

Strengths

- + Complete crawl coverage at 100% of discovered documentation scope (643 pages)
- + High example code reliability at 90.6%, demonstrating quality code samples
- + Strong API page detection with 154 pages identified and 75.37% reference coverage
- + Overall audit confidence of 85.94% provides reliable baseline metrics
- + Low SEO/geo issue rate at 4.28% indicates solid technical SEO foundation

Risks

- 31 confirmed broken internal documentation links create poor user experience and navigation failures
- Freshness visibility at only 20.84% prevents users from assessing content currency and trustworthiness
- 24.63% API reference gap leaves significant portions of API surface undocumented or undetected
- 5 unverified links due to authentication/rate-limiting may hide additional broken links
- Links confidence at 81.11% suggests potential for additional undiscovered link issues
- No repository broken links detected, but 31 docs-internal breaks indicate maintenance gaps
- Single-product topology with 643 pages requires systematic link maintenance processes

Limitations

- * External audit cannot verify content accuracy, technical correctness, or completeness of explanations
- * 5 unverified links due to authentication/rate-limiting may mask additional broken links not detected in this audit
- * API coverage detection relies on pattern matching; actual API completeness requires internal schema validation
- * Crawl limited to publicly accessible pages; authenticated or gated content not evaluated
- * Example code reliability is estimated through static analysis; runtime execution success not guaranteed

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
