

Checkly

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-05-06 10:19 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY

Risk: Moderate

Key Metrics

Pages scanned: 976

Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 54
- Link verification inconclusive for 47 URLs (auth/rate-limit/server block); these are excluded from broken-link counts.
- API usage-doc coverage is low: 50.0% (235 API pages detected)
- Example reliability estimate is low: 46.15%

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary

Documentation audit of checklyhq.com/docs crawled 976 pages (100% coverage of discovered scope). Critical issues identified: 54 confirmed broken internal links within documentation, 50% API reference coverage gap across 235 detected API pages, and 46.15% example reliability estimate indicating potential code rot. Freshness metadata present on only 38.11% of pages, limiting change tracking. Overall confidence score 72.89% with link verification at 48.47% due to 47 unverified URLs blocked by authentication or rate limiting.

External posture: SEO/GEO issue rate **8.7%**, public API coverage **50.0%**, broken links **54**.

77 Audit Score	B Grade	Moderate Risk Band
976 Pages Scanned	54 Broken Links	8.7% SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://checklyhq.com/docs	976	54	50.0	46.1	8.7

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	92+	-15
Industry average (developer docs)	85	-8
Minimum acceptable	70	+7
Your score	77	-

Gap to industry average: **8 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Board-Level Metrics

Internal Metrics (from scorecard)

Financial Exposure Model

Low Estimate \$140,822 annual exposure Remediation: \$2,090 Monthly loss: \$4,125 Opportunity: \$7,436/mo	Base Estimate \$249,513 annual exposure Remediation: \$5,445 Monthly loss: \$12,903 Opportunity: \$7,436/mo	High Estimate \$431,728 annual exposure Remediation: \$8,800 Monthly loss: \$27,808 Opportunity: \$7,436/mo
---	---	---

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	\$1,782	\$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	\$1,122	\$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	\$2,257	\$990
F-API-COVERAGE	Undocumented API operations	LOW	\$2,904	\$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	\$2,244	\$935
F-DRIFT	Code/docs contract drift	LOW	\$1,901	\$660
F-TERMINOLOGY	Terminology inconsistency	LOW	\$693	\$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Repair all 54 confirmed broken internal documentation links [impact: critical, effort: medium]
2. Audit and expand API reference documentation to close 50% coverage gap across 235 API pages [impact: critical, effort: high]

3. Validate and update code examples to improve 46.15% reliability estimate [impact: high, effort: high]
4. Implement last-updated metadata on remaining 61.89% of pages for freshness transparency [impact: high, effort: low]
5. Investigate 47 unverified links with authentication bypass or manual verification to confirm status [impact: medium, effort: medium]

Expert Analysis: Strengths and Risks

Strengths

- + Complete crawl coverage at 100% of discovered documentation scope (976 pages)
- + API page detection successful with 235 pages identified, enabling coverage analysis
- + No repository navigation link breakage (0 repo_broken_links_count)
- + Topology clearly defined as single-product documentation
- + Crawl trap detection active, filtering 723 non-documentation URLs

Risks

- 54 confirmed broken internal documentation links degrading user navigation and trust
- 50% API reference coverage gap leaves half of API surface undocumented or poorly linked
- 46.15% example reliability estimate suggests high probability of outdated or non-functional code samples
- 61.89% of pages lack last-updated timestamps, obscuring content freshness and maintenance status
- 47 unverified links due to authentication/rate-limiting may hide additional broken links
- 8.71% SEO/geo issue rate may impact discoverability in search and regional access
- Overall confidence at 72.89% with link confidence critically low at 48.47%

Limitations

- * 47 links unverified due to authentication, rate-limiting, or server blocks; actual broken link count may be higher
- * Example reliability is estimated via heuristics; actual code execution success requires runtime testing
- * API coverage calculation depends on detection accuracy; complex API structures may be underreported
- * External link validity subject to third-party availability at audit time; status may change post-audit
- * Content quality, accuracy, and completeness not assessed; audit covers structural and technical health only

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
