

Dyte

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-04-30 10:12 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY

Risk: Moderate

Key Metrics

Pages scanned: 1220

Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 712
- Link verification inconclusive for 2 URLs (auth/rate-limit/server block); these are excluded from broken-link counts.
- SEO/GEO issue rate is high: 15.31%
- API usage-doc coverage is low: 30.95% (187 API pages detected)

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary

Documentation audit of docs.dyte.io crawled 1220 pages with 100% coverage across 1225 discovered pages. Critical issue: 712 confirmed broken internal documentation links affecting user navigation. API reference coverage is low at 30.95% across 187 detected API pages. Freshness is strong with 90.74% of pages showing last-updated metadata. SEO/geo issues affect 15.31% of content, indicating potential discoverability problems.

External posture: SEO/GEO issue rate **15.3%**, public API coverage **30.9%**, broken links **712**.

75 Audit Score	B Grade	Moderate Risk Band
1220 Pages Scanned	712 Broken Links	15.3% SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://docs.dyte.io/	1220	712	30.9	89.2	15.3

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	92+	-17
Industry average (developer docs)	85	-10
Minimum acceptable	70	+5
Your score	75	-

Gap to industry average: **10 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Board-Level Metrics

Internal Metrics (from scorecard)

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
\$140,822 annual exposure Remediation: \$2,090 Monthly loss: \$4,125 Opportunity: \$7,436/mo	\$249,513 annual exposure Remediation: \$5,445 Monthly loss: \$12,903 Opportunity: \$7,436/mo	\$431,728 annual exposure Remediation: \$8,800 Monthly loss: \$27,808 Opportunity: \$7,436/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	\$1,782	\$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	\$1,122	\$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	\$2,257	\$990
F-API-COVERAGE	Undocumented API operations	LOW	\$2,904	\$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	\$2,244	\$935
F-DRIFT	Code/docs contract drift	LOW	\$1,901	\$660
F-TERMINOLOGY	Terminology inconsistency	LOW	\$693	\$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Audit and repair 712 broken internal documentation links to restore navigation integrity [impact: critical, effort: high]

2. Expand API reference documentation from 30.95% to minimum 80% coverage across 187 API pages [impact: critical, effort: high]
3. Resolve SEO/geo issues affecting 15.31% of pages to improve search discoverability [impact: high, effort: medium]
4. Investigate 768 trap URLs and URL structure to eliminate crawler confusion patterns [impact: medium, effort: medium]
5. Manually verify 2 auth-blocked links and establish monitoring for protected endpoints [impact: low, effort: low]

Expert Analysis: Strengths and Risks

Strengths

- + Complete crawl coverage at 100% (1220 of 1225 pages within scope)
- + High freshness coverage at 90.74% with last-updated metadata present
- + Strong example reliability at 89.2% across code samples
- + High overall confidence score of 91.39% for audit findings
- + No repository navigation link breakage (0 repo_broken_links_count)

Risks

- 712 broken internal documentation links create severe navigation and user experience degradation
- API reference coverage at 30.95% leaves 69% of API surface undocumented or poorly linked
- SEO/geo issue rate of 15.31% may reduce organic discoverability and search ranking
- 768 trap URLs skipped suggests potential crawler confusion or URL structure issues
- 2 unverified links due to auth/rate-limit/server blocks may hide additional broken links
- Low API reference coverage across 187 API pages indicates incomplete technical documentation
- Large gap between requested pages (2125) and crawled pages (1220) suggests access or structure barriers

Limitations

- * External audit cannot verify content accuracy, technical correctness, or completeness of explanations within pages
- * 2 links blocked by auth/rate-limit/server restrictions were not verified and may contain additional broken links
- * Audit cannot assess user comprehension, learning outcomes, or real-world usability of documentation
- * API coverage detection relies on pattern matching and may miss non-standard API documentation structures
- * Crawl cannot evaluate internal content management workflows, review processes, or documentation maintenance practices

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
