

Fivertran

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-05-07 11:13 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY

Key Metrics

Pages scanned: 6330

Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 9
- Link verification inconclusive for 71 URLs (auth/rate-limit/server block); these are excluded from broken-link counts.
- API usage-doc coverage is low: 46.48% (1604 API pages detected)
- Freshness visibility is weak: only 9.0% pages show last updated

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary

Fivertran documentation audit covered 6,330 pages from a discovered 6,475 total pages, achieving 100% crawl coverage within scope. The site contains 9 confirmed broken internal documentation links and 71 unverified links due to authentication or rate-limiting barriers. API reference coverage stands at 46.48% across 1,604 detected API pages, indicating significant gaps in usage documentation. Only 9.0% of pages display last-updated metadata, severely limiting freshness transparency. Overall audit confidence is 63.5%, with link verification confidence notably low at 25% due to access restrictions.

External posture: SEO/GEO issue rate **0.9%**, public API coverage **46.5%**, broken links **9**.

87 Audit Score	B+ Grade	Low Risk Band
6330 Pages Scanned	9 Broken Links	0.9% SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://fivertran.com/docs	6330	9	46.5	87.8	0.9

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	92+	-5
Industry average (developer docs)	85	+2
Minimum acceptable	70	+17
Your score	87	-

Board-Level Metrics

Internal Metrics (from scorecard)

Financial Exposure Model

Low Estimate \$140,822 annual exposure Remediation: \$2,090 Monthly loss: \$4,125 Opportunity: \$7,436/mo	Base Estimate \$249,513 annual exposure Remediation: \$5,445 Monthly loss: \$12,903 Opportunity: \$7,436/mo	High Estimate \$431,728 annual exposure Remediation: \$8,800 Monthly loss: \$27,808 Opportunity: \$7,436/mo
---	---	---

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	\$1,782	\$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	\$1,122	\$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	\$2,257	\$990
F-API-COVERAGE	Undocumented API operations	LOW	\$2,904	\$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	\$2,244	\$935
F-DRIFT	Code/docs contract drift	LOW	\$1,901	\$660
F-TERMINOLOGY	Terminology inconsistency	LOW	\$693	\$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Fix all 9 confirmed broken internal documentation links immediately [impact: critical, effort: low]
2. Implement last-updated timestamps on all pages to increase freshness coverage from 9.0% to 100% [impact: critical, effort: medium]

3. Expand API usage documentation to close the 53.52% coverage gap across 1,604 API pages [impact: high, effort: high]
4. Audit and resolve 71 unverified links by providing test credentials or whitelisting audit tooling [impact: high, effort: medium]
5. Investigate and document the 145 discovered but uncrawled pages to ensure completeness [impact: medium, effort: low]

Expert Analysis: Strengths and Risks

Strengths

- + Complete crawl coverage (100%) of in-scope documentation with 6,330 pages successfully indexed
- + Large-scale API documentation presence with 1,604 API pages detected across the site
- + No repository navigation link breakage (0 repo_broken_links_count)
- + Example code reliability estimated at 87.79%, indicating strong code sample quality
- + Minimal SEO/geo issues at 0.91% rate across crawled pages

Risks

- 9 confirmed broken internal documentation links degrade user navigation and trust
- 71 unverified links (blocked by auth/rate-limits) represent unknown quality exposure; 25% link confidence indicates high verification gap
- API reference coverage at 46.48% means over half of API surfaces lack adequate usage documentation
- Freshness metadata visible on only 9.0% of pages prevents users from assessing content currency
- Overall confidence of 63.5% suggests moderate audit blind spots that may hide additional issues
- 6,475 discovered pages vs 6,330 crawled indicates 145 pages exist but were not fully audited
- Large documentation footprint (6,330 pages) increases maintenance burden and drift risk without visible freshness tracking

Limitations

- * External audit cannot verify content accuracy, technical correctness, or completeness of explanations within documentation pages
- * 71 links blocked by authentication, rate-limiting, or server restrictions could not be verified; actual broken link count may be higher
- * API coverage detection relies on pattern matching; actual API documentation quality and completeness require manual subject-matter review
- * Freshness assessment limited to visible metadata (9.0% coverage); actual content currency unknown for 91% of pages without timestamps

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
