Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-04-29 10:51 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY

Key Metrics

Pages scanned: 134

Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 4
- API usage-doc coverage is low: 42.9% (38 API pages detected)
- Freshness visibility is weak: only 0.0% pages show last updated

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary

Documentation audit of docs.medusajs.com covered 134 pages with 100% crawl coverage and 91.5% overall confidence. The site contains 4 confirmed broken internal documentation links requiring immediate repair. API reference coverage is critically low at 42.9% with only 38 API pages detected across the documentation. Freshness metadata is entirely absent with 0% of pages displaying last-updated timestamps. Example code reliability is strong at 94.83%, indicating solid technical content quality.

External posture: SEO/GEO issue rate **0.2%**, public API coverage **42.9%**, broken links **4**.

88 Audit Score	B+ Grade	Low Risk Band
134 Pages Scanned	4 Broken Links	0.2% SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://docs.medusajs.com/	134	4	42.9	94.8	0.2

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	92+	-4
Industry average (developer docs)	85	+3
Minimum acceptable	70	+18
Your score	88	-

Board-Level Metrics

Internal Metrics (from scorecard)

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
\$140,822 annual exposure Remediation: \$2,090 Monthly loss: \$4,125 Opportunity: \$7,436/mo	\$249,513 annual exposure Remediation: \$5,445 Monthly loss: \$12,903 Opportunity: \$7,436/mo	\$431,728 annual exposure Remediation: \$8,800 Monthly loss: \$27,808 Opportunity: \$7,436/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	\$1,782	\$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	\$1,122	\$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	\$2,257	\$990
F-API-COVERAGE	Undocumented API operations	LOW	\$2,904	\$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	\$2,244	\$935
F-DRIFT	Code/docs contract drift	LOW	\$1,901	\$660
F-TERMINOLOGY	Terminology inconsistency	LOW	\$693	\$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Repair 4 confirmed broken internal documentation links to restore navigation integrity [impact: critical, effort: low]

2. Expand API reference documentation from 42.9% to minimum 80% coverage across all public APIs [impact: critical, effort: high]
3. Implement last-updated timestamps on all 134 pages to establish content freshness visibility [impact: high, effort: medium]
4. Audit API page detection methodology to confirm 38 pages represent complete API surface area [impact: high, effort: low]
5. Establish automated link checking in CI/CD pipeline to prevent future broken link introduction [impact: medium, effort: medium]

Expert Analysis: Strengths and Risks

Strengths

- + Complete crawl coverage achieved at 100% (134 of 134 discovered pages)
- + High overall audit confidence at 91.5% with strong link verification at 95%
- + Example code reliability estimated at 94.83%, demonstrating quality technical samples
- + Zero repository navigation broken links, indicating clean source control integration
- + Low SEO/geo issue rate at 0.19%, showing good search optimization fundamentals

Risks

- API reference coverage critically low at 42.9%, leaving majority of API surface undocumented
- Only 38 API pages detected for a product with 134 total documentation pages (28% API density)
- Zero freshness metadata across entire documentation set prevents users from assessing content currency
- 4 confirmed broken internal documentation links degrade user navigation experience
- API confidence at 85% suggests potential gaps in API page detection or classification
- Absence of last-updated timestamps creates trust issues for rapidly evolving product documentation
- Low API coverage may force users to rely on source code inspection rather than official docs

Limitations

- * External audit cannot verify accuracy of technical content, code examples, or API specifications against actual product behavior
- * API coverage calculation depends on automated detection patterns which may misclassify pages or miss non-standard API documentation formats
- * Broken link detection limited to crawled pages only; dynamic content, authenticated sections, or JavaScript-rendered links may be excluded
- * Example reliability is estimated through static analysis and cannot confirm runtime execution success or version compatibility
- * Freshness assessment relies on visible metadata only; actual content update frequency may differ from displayed timestamps

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
