

Metriport

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-04-25 17:05 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY

Risk: Moderate

Key Metrics

Pages scanned: 359

Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 4
- SEO/GEO issue rate is high: 14.55%
- Example reliability estimate is low: 0.0%
- Freshness visibility is weak: only 6.96% pages show last updated

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary

Documentation audit of docs.metriport.com covered 359 pages with 100.28% crawl coverage and 91.5% overall confidence. Critical issues include 4 confirmed broken internal documentation links, 0% example reliability (no working code examples detected), and only 6.96% of pages displaying freshness metadata. API reference coverage is 80% across 349 detected API pages. SEO/geo issues affect 14.55% of pages, indicating potential discoverability problems.

External posture: SEO/GEO issue rate **14.6%**, public API coverage **80.0%**, broken links **4**.

72 Audit Score	B Grade	Moderate Risk Band
359 Pages Scanned	4 Broken Links	14.6% SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://docs.metriport.com/	359	4	80.0	0.0	14.6

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	92+	-20
Industry average (developer docs)	85	-13
Minimum acceptable	70	+2
Your score	72	-

Gap to industry average: **13 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Board-Level Metrics

Internal Metrics (from scorecard)

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
\$140,822 annual exposure Remediation: \$2,090 Monthly loss: \$4,125 Opportunity: \$7,436/mo	\$249,513 annual exposure Remediation: \$5,445 Monthly loss: \$12,903 Opportunity: \$7,436/mo	\$431,728 annual exposure Remediation: \$8,800 Monthly loss: \$27,808 Opportunity: \$7,436/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	\$1,782	\$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	\$1,122	\$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	\$2,257	\$990
F-API-COVERAGE	Undocumented API operations	LOW	\$2,904	\$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	\$2,244	\$935
F-DRIFT	Code/docs contract drift	LOW	\$1,901	\$660
F-TERMINOLOGY	Terminology inconsistency	LOW	\$693	\$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Implement automated code example testing and validation across all documentation pages to achieve >80% example reliability [impact: critical, effort: high]
2. Fix all 4 confirmed broken internal documentation links immediately [impact: critical, effort: low]

3. Add last-updated metadata to all pages, targeting 90%+ coverage with automated git-based timestamps [impact: high, effort: medium]
4. Audit and resolve SEO/geo issues on the 52+ affected pages (14.55% of 359) [impact: high, effort: medium]
5. Close the 20% API reference gap by documenting missing endpoints or improving detection patterns [impact: medium, effort: medium]

Expert Analysis: Strengths and Risks

Strengths

- + Complete crawl coverage (100.28%) with 359 pages successfully examined
- + Strong API documentation presence with 349 API pages detected and 80% reference coverage
- + High overall audit confidence at 91.5% with robust link verification (95% confidence)
- + No repository navigation broken links; all 4 broken links are user-facing documentation
- + Clean crawl with zero trap URLs or excluded links

Risks

- Zero percent example reliability means no working code examples detected across 359 pages, severely impacting developer onboarding
- 4 confirmed broken internal documentation links degrade user trust and navigation experience
- Only 6.96% freshness coverage leaves users unable to assess content currency on 93% of pages
- 14.55% SEO/geo issue rate may reduce organic discoverability and search ranking
- 20% API reference gap leaves portions of API undocumented or undetectable
- No detection note on examples suggests systematic issue with code sample implementation or testing
- Lack of last-updated timestamps prevents users from evaluating documentation reliability

Limitations

- * External audit cannot verify functional correctness of API documentation content or parameter accuracy
- * Code example execution environment and runtime dependencies are not validated; examples may fail in production contexts
- * Audit cannot assess documentation completeness for internal/private APIs not exposed in public documentation
- * User comprehension, tutorial effectiveness, and actual developer success rates are not measured
- * Third-party integrations, SDK documentation hosted externally, and embedded widgets are outside audit scope

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
