

Okteto

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-05-05 10:59 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY

Risk: Moderate

Key Metrics

Pages scanned: 2139

Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 23
- Link verification inconclusive for 3 URLs (auth/rate-limit/server block); these are excluded from broken-link counts.
- API usage-doc coverage is low: 53.7% (332 API pages detected)
- Freshness visibility is weak: only 11.97% pages show last updated

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary

Documentation audit of `okteto.com/docs` crawled 2,139 pages with 100% coverage across the site. 23 confirmed broken internal documentation links require immediate remediation. API reference coverage stands at 53.7% across 332 detected API pages, indicating significant documentation gaps. Only 11.97% of pages display last-updated metadata, severely limiting freshness transparency. Overall audit confidence is 86.88%, with link verification confidence at 83.46% due to 3 unverified URLs blocked by authentication or rate limits.

External posture: SEO/GEO issue rate **6.7%**, public API coverage **53.7%**, broken links **23**.

84 Audit Score	B+ Grade	Moderate Risk Band
2139 Pages Scanned	23 Broken Links	6.7% SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
<code>https://okteto.com/docs</code>	2139	23	53.7	79.9	6.7

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	92+	-8
Industry average (developer docs)	85	-1
Minimum acceptable	70	+14
Your score	84	-

Gap to industry average: **1 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Board-Level Metrics

Internal Metrics (from scorecard)

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
\$140,822 annual exposure	\$249,513 annual exposure	\$431,728 annual exposure
Remediation: \$2,090 Monthly loss: \$4,125 Opportunity: \$7,436/mo	Remediation: \$5,445 Monthly loss: \$12,903 Opportunity: \$7,436/mo	Remediation: \$8,800 Monthly loss: \$27,808 Opportunity: \$7,436/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	\$1,782	\$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	\$1,122	\$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	\$2,257	\$990
F-API-COVERAGE	Undocumented API operations	LOW	\$2,904	\$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	\$2,244	\$935
F-DRIFT	Code/docs contract drift	LOW	\$1,901	\$660
F-TERMINOLOGY	Terminology inconsistency	LOW	\$693	\$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Repair all 23 confirmed broken internal documentation links [impact: critical, effort: low]
2. Expand API reference documentation to achieve minimum 80% coverage of detected API surface (currently 53.7%) [impact: critical, effort: high]

3. Implement last-updated timestamps on all documentation pages (currently 11.97% coverage) [impact: high, effort: medium]
4. Audit and fix example code reliability issues affecting ~20% of samples [impact: high, effort: medium]
5. Resolve SEO/geo issues affecting 6.72% of pages to improve search discoverability [impact: medium, effort: medium]

Expert Analysis: Strengths and Risks

Strengths

- + Complete crawl coverage achieved: 100% of in-scope documentation pages indexed (2,139 pages)
- + Single-product topology provides clear documentation structure and navigation model
- + API pages successfully detected (332 pages) enabling quantitative coverage analysis
- + Example code reliability estimated at 79.91%, indicating generally functional code samples
- + Trap URL detection prevented 180 false positives from skewing link quality metrics

Risks

- 23 confirmed broken internal documentation links degrade user experience and SEO authority
- API reference coverage at 53.7% leaves nearly half of API surface undocumented or poorly linked
- Freshness metadata present on only 11.97% of pages prevents users from assessing content currency
- SEO/geo issue rate of 6.72% may impact discoverability in search engines and international markets
- 3 unverified links due to authentication/rate-limiting create blind spots in link integrity assessment
- Link verification confidence at 83.46% indicates moderate uncertainty in external link health
- Example reliability at 79.91% means approximately 1 in 5 code samples may fail or mislead users

Limitations

- * External audit cannot verify 3 URLs blocked by authentication, rate limits, or server restrictions; actual broken link count may differ
- * Crawl cannot assess accuracy, completeness, or technical correctness of documentation content itself
- * API coverage metrics depend on automated detection patterns; manual API inventory may reveal different coverage gaps
- * Example reliability is estimated through static analysis; runtime execution in actual user environments not tested
- * Audit reflects point-in-time snapshot; documentation and link health may change immediately after assessment

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
