

Saleor

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-04-29 10:47 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY

Risk: Moderate

Key Metrics

Pages scanned: 2173

Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 2
- Link verification inconclusive for 1 URLs (auth/rate-limit/server block); these are excluded from broken-link counts.
- SEO/GEO issue rate is high: 22.1%
- API usage-doc coverage is low: 35.29% (1962 API pages detected)

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary

Audit of docs.saleor.io crawled 2,173 pages with 100% coverage across a single-product documentation site. Only 2 confirmed broken internal links were found, both within user-facing documentation. API reference coverage is low at 35.29% despite detecting 1,962 API pages. SEO/metadata issues affect 22.1% of pages, and freshness metadata is nearly absent with only 0.78% of pages displaying last-updated timestamps. Example code reliability is estimated at 85.95%, and overall audit confidence stands at 78.17%.

External posture: SEO/GEO issue rate **22.1%**, public API coverage **35.3%**, broken links **2**.

72 Audit Score	B Grade	Moderate Risk Band
2173 Pages Scanned	2 Broken Links	22.1% SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://docs.saleor.io/	2173	2	35.3	86.0	22.1

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	92+	-20
Industry average (developer docs)	85	-13
Minimum acceptable	70	+2
Your score	72	-

Gap to industry average: **13 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Board-Level Metrics

Internal Metrics (from scorecard)

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
\$140,822 annual exposure	\$249,513 annual exposure	\$431,728 annual exposure
Remediation: \$2,090 Monthly loss: \$4,125 Opportunity: \$7,436/mo	Remediation: \$5,445 Monthly loss: \$12,903 Opportunity: \$7,436/mo	Remediation: \$8,800 Monthly loss: \$27,808 Opportunity: \$7,436/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	\$1,782	\$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	\$1,122	\$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	\$2,257	\$990
F-API-COVERAGE	Undocumented API operations	LOW	\$2,904	\$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	\$2,244	\$935
F-DRIFT	Code/docs contract drift	LOW	\$1,901	\$660
F-TERMINOLOGY	Terminology inconsistency	LOW	\$693	\$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Implement last-updated timestamps across all documentation pages to address 0.78% freshness coverage [impact: critical, effort: low]

2. Audit and expand API usage documentation to improve 35.29% reference coverage across 1,962 API pages [impact: critical, effort: high]
3. Remediate SEO/metadata issues affecting 22.1% of pages (481 pages) to improve discoverability [impact: high, effort: medium]
4. Fix 2 confirmed broken internal documentation links and investigate 1 unverified link [impact: medium, effort: low]
5. Review and validate 78 crawler-trap URLs to ensure no legitimate documentation is excluded [impact: medium, effort: medium]

Expert Analysis: Strengths and Risks

Strengths

- + Complete crawl coverage at 100% with 2,173 pages successfully examined
- + Minimal broken links with only 2 confirmed broken internal documentation links
- + No broken repository navigation links detected
- + High example code reliability estimate at 85.95%
- + Large API surface detected with 1,962 API-related pages identified

Risks

- API reference coverage critically low at 35.29%, indicating poor integration between API docs and usage examples
- SEO/metadata issues present on 22.1% of pages (481 pages), impacting discoverability and search ranking
- Freshness metadata virtually absent with only 0.78% coverage, preventing users from assessing content currency
- 1 link could not be verified due to authentication, rate-limiting, or server blocks, creating uncertainty
- Overall audit confidence at 78.17% suggests moderate reliability gaps in findings
- Link verification confidence at 61.67% is notably low, indicating potential false negatives in link health
- 78 URLs skipped as crawler traps may hide additional documentation quality issues

Limitations

- * External audit cannot verify content accuracy, technical correctness, or whether documentation matches actual product behavior
- * Link verification confidence of 61.67% means some broken links may be undetected or false positives may exist; 1 link remains unverified due to access restrictions
- * API coverage detection relies on heuristics and may not capture all integration gaps or measure documentation quality and completeness
- * Crawler trap detection (78 URLs skipped) may exclude valid pages or miss problematic infinite-loop patterns
- * Example code reliability estimate does not guarantee executability, version compatibility, or real-world applicability of code samples

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
