

Solidus

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-04-29 12:35 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY

Risk: Moderate

Key Metrics

Pages scanned: 1558

Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- Broken internal links: 78
- Link verification inconclusive for 4 URLs (auth/rate-limit/server block); these are excluded from broken-link counts.
- SEO/GEO issue rate is high: 13.61%
- API usage-doc coverage is low: 0.0% (264 API pages detected)

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary

Documentation audit across 3 Solidus documentation sites crawled 1558 pages with 100% coverage of discovered URLs (1642 total). 78 confirmed broken internal links exist within user-facing documentation. API reference coverage is 0%, despite 264 API pages detected, indicating no usage examples or integration guidance. 58.6% of pages lack freshness metadata, and SEO/geo issues affect 13.61% of content. Overall audit confidence is 79.05%, with API coverage confidence at only 55%.

External posture: SEO/GEO issue rate **13.6%**, public API coverage **0.0%**, broken links **78**.

71 Audit Score	B Grade	Moderate Risk Band
1558 Pages Scanned	78 Broken Links	13.6% SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://legacy-guides.solidus.io/	1	0	N/A	0.0	50.0
https://guides.solidus.io/	779	39	0.0	92.8	13.6
https://edgeguides.solidus.io/	778	39	0.0	92.8	13.6

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	92+	-21
Industry average (developer docs)	85	-14
Minimum acceptable	70	+1
Your score	71	-

Gap to industry average: **14 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Board-Level Metrics

Internal Metrics (from scorecard)

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
\$140,822 annual exposure	\$249,513 annual exposure	\$431,728 annual exposure
Remediation: \$2,090 Monthly loss: \$4,125 Opportunity: \$7,436/mo	Remediation: \$5,445 Monthly loss: \$12,903 Opportunity: \$7,436/mo	Remediation: \$8,800 Monthly loss: \$27,808 Opportunity: \$7,436/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	\$1,782	\$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	\$1,122	\$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	\$2,257	\$990
F-API-COVERAGE	Undocumented API operations	LOW	\$2,904	\$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	\$2,244	\$935
F-DRIFT	Code/docs contract drift	LOW	\$1,901	\$660
F-TERMINOLOGY	Terminology inconsistency	LOW	\$693	\$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Fix all 78 broken internal documentation links to restore navigation integrity [impact: critical, effort: medium]
2. Create usage examples and integration guides for the 264 detected API pages to achieve minimum 60% reference coverage [impact: critical, effort: high]

3. Implement last-updated metadata on all pages (currently missing on 41.4%) to establish content freshness signals [impact: high, effort: low]
4. Consolidate or create unified navigation across 3 documentation sites to reduce discoverability fragmentation [impact: high, effort: medium]
5. Remediate SEO/geo issues affecting 13.61% of pages (212 pages) to improve search visibility [impact: medium, effort: medium]

Expert Analysis: Strengths and Risks

Strengths

- + Complete crawl coverage achieved (100% of 1642 discovered pages within scope)
- + No repository navigation link breakage (repo_broken_links_count: 0)
- + Example code reliability estimated at 92.77%
- + Multi-version documentation strategy in place (edge, stable, legacy guides)
- + High link verification confidence at 90.12%

Risks

- 78 broken internal documentation links create poor user experience and navigation failures
- Zero API reference coverage (0.0%) means no usage examples or integration patterns for 264 detected API pages
- Multi-site documentation topology (3 separate sites) creates discoverability and consistency risks
- 41.4% of pages missing last-updated metadata undermines content trustworthiness
- SEO/geo issue rate of 13.61% impacts search discoverability and international reach
- API coverage confidence only 55% suggests potential detection limitations in methodology
- 4 unverified links excluded from analysis due to auth/rate-limit barriers may hide additional issues

Limitations

- * External audit cannot verify actual code execution or functional correctness of 92.77% example reliability estimate
- * 4 links excluded due to authentication/rate-limiting could not be verified; actual broken link count may be higher
- * API page detection at 55% confidence may undercount actual API surface area or misclassify reference content
- * Crawl cannot assess documentation accuracy, completeness of feature coverage, or alignment with current product capabilities
- * Multi-site topology may hide cross-site linking issues or version synchronization problems not detectable in single-pass crawl

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
