

Val Town

Documentation Infrastructure Audit Report

Prepared by VeriOps

2026-04-28 09:57 UTC

CONFIDENTIAL | FOR INTERNAL USE ONLY

Risk: High

Key Metrics

Pages scanned: 110

Report type: Premium Executive Audit

Methodology: 5-pillar automated analysis + expert synthesis

Headline Findings

- API usage-doc coverage is low: 0.0% (24 API pages detected)
- Example reliability estimate is low: 0.0%

This report is generated automatically by the VeriOps platform. Estimates are directional.

Executive Summary

Documentation audit of docs.val.town covered 110 pages with 100% crawl coverage and 81% overall confidence. Zero broken links detected across all categories (internal, docs, and repository). Critical gaps identified: 24 API pages detected but 0% reference coverage, and 0% example reliability estimate. SEO/geo issues present at 5.23% rate with 100% freshness coverage.

External posture: SEO/GEO issue rate **5.2%**, public API coverage **0.0%**, broken links **0**.

62 Audit Score	C Grade	High Risk Band
110 Pages Scanned	0 Broken Links	5.2% SEO Issue Rate

Per-Site Breakdown

Site URL	Pages	Broken Links	API Cov %	Example Rel %	SEO Issue %
https://docs.val.town/	110	0	0.0	0.0	5.2

Industry Benchmark Comparison

Benchmark	Score	Gap
Top performers (Stripe, Twilio)	92+	-30
Industry average (developer docs)	85	-23
Minimum acceptable	70	-8
Your score	62	-

Gap to industry average: **23 points**. Top-performing developer documentation platforms (Stripe, Twilio, Vercel) score 92+. Closing this gap reduces support ticket volume by an estimated 20-30%.

Board-Level Metrics

Internal Metrics (from scorecard)

Financial Exposure Model

Low Estimate	Base Estimate	High Estimate
\$140,822 annual exposure Remediation: \$2,090 Monthly loss: \$4,125 Opportunity: \$7,436/mo	\$249,513 annual exposure Remediation: \$5,445 Monthly loss: \$12,903 Opportunity: \$7,436/mo	\$431,728 annual exposure Remediation: \$8,800 Monthly loss: \$27,808 Opportunity: \$7,436/mo

Remediation: finding-level effort model | Monthly loss: operational friction model | Opportunity: engineering/support/release delay

Risk Matrix

ID	Issue	Severity	Monthly Loss	Fix Cost
F-LAYERS	Missing required doc layers	HIGH	\$1,782	\$825
F-FRESHNESS	Documentation freshness debt	MEDIUM	\$1,122	\$550
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM	\$2,257	\$990
F-API-COVERAGE	Undocumented API operations	LOW	\$2,904	\$1,100
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW	\$2,244	\$935
F-DRIFT	Code/docs contract drift	LOW	\$1,901	\$660
F-TERMINOLOGY	Terminology inconsistency	LOW	\$693	\$385

Priority Action Plan (Next 14 Days)

ID	Finding	Severity
F-LAYERS	Missing required doc layers	HIGH
F-FRESHNESS	Documentation freshness debt	MEDIUM
F-RETRIEVAL	RAG retrieval quality risk	MEDIUM
F-API-COVERAGE	Undocumented API operations	LOW
F-EXAMPLES-RELIABILITY	Code examples fail or are non-runnable	LOW

Recommended Actions

1. Implement structured API reference documentation for all 24 detected API pages with parameters, return types, and error codes [impact: critical, effort: high]

2. Establish automated example testing pipeline to validate code samples and improve 0% reliability score [impact: critical, effort: medium]
3. Audit and reclassify the 24 API pages to improve 55% API confidence and ensure proper coverage measurement [impact: high, effort: low]
4. Address 5.23% SEO/geo issues to improve discoverability and search engine ranking [impact: medium, effort: low]
5. Document API usage patterns and integration guides to bridge gap between detected API pages and reference coverage [impact: high, effort: medium]

Expert Analysis: Strengths and Risks

Strengths

- + Complete crawl coverage at 100% with all 110 discovered pages successfully examined
- + Zero broken links across all categories: no internal, documentation, or repository navigation link failures
- + 100% last-updated metadata coverage indicating strong freshness tracking
- + High crawl confidence at 95% and links confidence at 95%
- + Low SEO/geo issue rate at 5.23%

Risks

- 0% API reference coverage despite 24 API pages detected represents critical documentation gap for developer onboarding
- 0% example reliability estimate indicates code examples may be untested, outdated, or non-functional
- API confidence at only 55% suggests potential detection or classification issues with API documentation
- Overall confidence of 81% leaves 19% uncertainty margin in audit findings
- No automated validation of example code execution or accuracy
- Missing structured API reference documentation may force developers to reverse-engineer from examples
- Low example reliability combined with zero API coverage creates compounding risk for developer experience

Limitations

- * External audit cannot verify actual functionality or accuracy of code examples, only structural presence and format
- * API page detection relies on pattern matching and may misclassify pages or miss non-standard API documentation structures
- * Crawl limited to publicly accessible pages; cannot audit authentication-required or dynamically generated content
- * Link verification confirms HTTP response codes but cannot validate semantic correctness of link destinations or content relevance

Methodology

This audit applies a rigorous, repeatable methodology combining automated analysis with expert synthesis. The platform evaluates documentation quality across five pillars.

1. Automated Crawl + Structural HTML Analysis

Every public documentation page is crawled and analyzed for structural integrity, link health, navigation depth, and content organization. The crawler detects broken links, orphaned pages, redirect chains, and missing metadata.

2. SEO/GEO Scoring Model (24 Checks)

Each page is evaluated against 8 GEO checks (LLM/AI search optimization) and 16 SEO checks (traditional search engine optimization). Checks cover meta descriptions, heading hierarchy, fact density, URL structure, internal linking, and content depth.

3. API Reference Cross-Coverage Analysis

The platform compares published API reference documentation against the actual API surface (OpenAPI specs, GraphQL schemas, gRPC protos). Coverage gaps, undocumented endpoints, and stale references are identified.

4. Code Example Reliability Estimation

Code examples embedded in documentation are analyzed for syntactic correctness, completeness, and consistency with current API signatures. Reliability scores estimate the likelihood of examples working as documented.

5. Executive Synthesis and Prioritization

All quantitative findings are synthesized into actionable executive narratives. The analysis identifies patterns, prioritizes risks, and generates strategic recommendations calibrated to business impact.

Appendix A -- Economic Model Assumptions

Assumption	Value
engineer_hourly_usd	110.0
support_hourly_usd	50.0
release_count_per_month	8.0
baseline_manual_sync_hours_per_week	12.0
avg_release_delay_hours	4.5
monthly_support_tickets	800.0
docs_related_ticket_share	0.22
avg_ticket_handling_minutes	24.0

Note: estimates are directional and should be calibrated with client rates, release cadence, and support volume.

Appendix B -- Evidence Traceability

Finding	Evidence Source	Confidence
F-LAYERS -- Missing required doc layers	policy pack + frontmatter layer scan	HIGH
F-FRESHNESS -- Documentation freshness debt	frontmatter date scan	HIGH
F-RETRIEVAL -- RAG retrieval quality risk	retrieval_evals_report.json	HIGH
F-API-COVERAGE -- Undocumented API operations	OpenAPI + docs text scan	HIGH
F-EXAMPLES-RELIABILITY -- Code examples fail or are non-runnable	examples_smoke_report.json	HIGH
F-DRIFT -- Code/docs contract drift	pr_docs_contract.json + api_sdk_drift_report.json	HIGH
F-TERMINOLOGY -- Terminology inconsistency	glossary.yml forbidden terms scan	HIGH

All findings are traceable to automated checks. Evidence sources reference specific crawl data, API specs, or code analysis results.
